

## Information Technology Services

We understand that ever-changing technologies can be a challenge for companies to manage, especially during a transitional period. This is why we provide expert technical services to help ensure that your IT hardware, software, services and vendors are up to date across the organization. With legacy applications becoming more difficult to support, our knowledge of Virtualization, along with Legacy and current operating systems and software, can help you stay ahead of the technology curve.

From the cloud to the desktop our industry experts can help you maintain an operational up time while providing a clear path to tomorrow's technology.

- Our IT services include:
  - Application implementation, from the cloud to the desktop
    - Whether hosted or Premise based applications, we can provide implementation assistance as well as ongoing support. Our experience also includes most desktop and server applications.
  - Data Migration and Conversion from legacy applications to current
    - From small databases to large, our conversion and migration services include mapping, data scrubbing and data consolidation.
  - Develop systems integrations and user acceptance testing strategies
    - In order for customers to have complete assurance in new or upgraded applications, we provide the ability to test application configuration and data integrity.
  - Design, install and management of network infrastructure
    - From structured cabling to routing and switching we provide industry standard design, installation and configuration along with monitoring.
  - Data and Network security, securing your intellectual data
    - Internal and external data security by way of industry trusted firewalls and file/share access control via operating system standards.
  - Turnkey solutions including network design, installation and management
    - Whether a new start-up or a upgrade or a facility move, we can design the entire network including the wiring, switching, routing, internet, servers, applications, data security plan. We can also install and implement the design as well as manage it for years to come.
  - Telephony solutions, recommendations and management
    - With our 30 years of experience in telecommunications, we can assist you in finding, purchasing and managing a new or existing telephone solution.

- Server, Desktop, Application and Client server product installation, management and support
  - Our extensive knowledge of server operating systems, Server applications and desktop applications allow us to manage nearly any application your company will ever use.

## Information Technology Experience

Today, there is no longer just one solution to meet the needs of today's business. It used to be that you had one or two choices in what operating system or application suite you used. Now there are many choices in all of the above. With the advent of Linux and other Open Source products, companies now have a choice as to the applications they will use to run their company. What platforms they will use and how to interconnect all of them into a cohesive business network. As an IT service provider we can supply you not only with insight and recommendations, but we can leverage all of the current operating systems and platforms to provide the most effective work space ever.

- Our Experience includes:
  - Microsoft Server platforms from Windows NT 4.1 to Current windows Server 2012 R2
  - Microsoft Desktop platforms from Windows 3.1 to the current Windows 8.1
  - Android devices and operating systems for mobile computing
  - Apple devices and operating systems for mobile computing
  - Linux Server and Desktop
  - Microsoft Server Products
    - SharePoint 2007, 2010 and 2013
    - Exchange 2003, 2007, 2010 and 2013
    - MS SQL and Supporting Applications
    - Microsoft Active Directory across multiple platforms
    - All of the support applications including DHCP, DNS, WINS, DFS, etc.
    - Hyper -V Virtualization
  - Microsoft Application Suites including Office from version 2.0 to office 2013
  - Oracle Database technology
